

Abstract

A vortex evaporator (1) comprises rack (2) for receiving several sample vessels (20) with samples (20). The rack (2) is movable and heatable. The evaporator comprises connection means (6, 7, 8) which gas-tightly connect the sample vessels (20) individually or in groups to a vacuum pump.

1. A vortex evaporator (1) comprising a rack (2) for receiving several sample vessels (20) with samples (20). The rack (2) is movable and heatable. The evaporator comprises connection means (6, 7, 8) which gas-tightly connect the sample vessels (20) individually or in groups to a vacuum pump.
